- Live Demo of the Project
- Embedded Video of Project
- Conclusion
- Future Scope

Abstract

- Smokey.io is a Career Helper chatbot primarily designed to aid marketing aspirants of different domains in refining their resumes and getting guidance on building projects for their portfolios.
- This chatbot is a basic prototype made using CoPilot studio, using prompt assistance from Gemini AI.
- The expected outcomes are to give users clarity on their career path within marketing
Summarize the expected outcomes briefly.

Problem Statement

- Smokey addresses the core problem of every young marketing professional – lack of clarity on how to apply for their dream marketing career path – while being ATS visible, and showing impact rather than bylines.
- This is an important distinction at a time AI filters out the cream from the crop, placing more emphasis on soft skills and agency rather than a degree.
- Note that Smokey is currently a simple prompt-based chatbot built on a single dataset, absent of any APIs or web scraping.

Proposed Solution

[Describe your proposed solution here. Explain how your approach solves the identified problem. **Mention the methodology, tools, and steps you followed. Highlight the key benefits and innovations of your solution compared to existing methods.]**

My proposed solution is a one-stop medium – a chatbot that assists you with timely, relevant, and actionable advice rather than half baked knowledge of influencers online.

System Architecture

Data Input / Source

[Describe data sources: raw files, databases, APIs, uploads, etc.]

Processing / Analysis

[Explain how data is cleaned, transformed, and analyzed using your tools.]

AI / Tool Integration

[Detail how Excel, Power BI, Copilot, or AI Chatbots are integrated.]

Output / Dashboard

[Describe what the final output looks like: report, chart, dashboard.]

Live Demo of Project

Here's the list of some demo screenshots / features of the project:

Demo 1

[Add description of Demo 1 here — what this demo shows, key features, and results achieved.]

Demo 2

[Add description of Demo 2 here — what this demo shows, key features, and results achieved.]

Demo 3

[Add description of Demo 3 here — what this demo shows, key features, and results achieved.]

Conclusion

[Write your project conclusion here. Summarize what was accomplished, the key results and findings, and the overall impact of your work. Mention whether the objectives were achieved and what value this project adds to the domain.]

Future Scope

[Describe the future enhancements and improvements planned for this project. Mention additional features, scalability plans, integration possibilities, or further research areas that can extend the project's impact.]

Thank You
